

Amendments To The Specification

Amend the title, at page 1, as follows: RADIO COMMUNICATION SYSTEM USING WIDEBAND CODE DIVISION MULTIPLE ACCESS (WCDMA).

Replace the paragraph on page 4, lines 22-27 with the following:

The CMF dot-product adder chain includes a multiplier (not shown) for multiplying the signal arriving at each input with a coefficient determined by a code identifying the mobile station under consideration. Summing means (not shown) sums the resultant products for each input and a threshold device (not shown) monitors the sum of the products and generates a signal indicative of a correlation being achieved when the sum of the products exceeds a predetermined threshold.
